Canadian Society for Environmental Medicine

## **The Canadian Society for Environmental Medicine**

is an incorporated (1985) non-profit foundation dedicated to advancing human health and well-being through:

1. study of the close relationships between people and their environments and important health effects that may result from these interactions;
2. promotion of environmental stewardship to prevent pollution-related illnesses, in collaboration with other similarly motivated organizations;
3. improvement in access to a comprehensive range of medical and social services for individuals adversely affected by environmental exposures;
4. education of the public and health care professionals about environment-related illnesses; and
5. stimulation of, and involvement in, environmental health research.

### **Environmental Health in Hospital *A Practical Guide for Hospital Staff* Part II: Environment-sensitive Care (Part I: Pollution Prevention)**

This guide is based on current knowledge and parts of it may be changed as new research findings emerge with regard to the effects of environment on health and effective prevention and remediation strategies. Suggestions are offered which may assist refinement of hospital policies that promote and protect patient and staff health, and optimize care for individual patients with environment-sensitive illnesses. It is acknowledged that the available evidence upon which these suggestions are based varies in quantity, type, and quality.

Some suggestions in this guide may not be suitable for some hospitals.

This publication was developed as a collaborative process over several years, and thus in total may not necessarily represent the views of individual contributors.

The Canadian Society for Environmental Medicine assumes no liability for any damage, injury or expense that may be incurred as a result of this publication.
